

Integrated, Real-Time Threat Protection

AGAINST VIRUSES | WORMS | TROJANS
SPYWARE | ADWARE |
PHISHING | INTRUSIONS
AND OTHER MALICIOUS THREATS

NOD32 is a unified Anti-Threat system that utilizes a single optimized engine to detect and protect against a wide range of evolving threats, including viruses, spyware, adware, and even some phishing attacks — in real-time, before signatures are available in most cases. NOD32 is the fastest, most accurate, and lowest impact solution in the industry, and hasn't missed a virus In the Wild in the past seven years — since May 1998 (Virus Bulletin).

The advanced **ThreatSense™** engine is a sophisticated system of advanced heuristics which proactively decodes and analyzes executable code to identify increasingly sophisticated malicious behavior characteristic of today's evolving threats.

Best Detection

- NOD32 has not missed a single in-the-wild virus in seven years, and is the record holder of 31 VirusBulletin 100% awards. (www.virusbtn.com)
- Known and New Threats: ThreatSense™ technology detects 92% of threats heuristically, including variants of MyDoom, Netsky, Bagle and Mytob
- Lowest false positive rate
- Intelligent, parallel use of advanced heuristics and generic signatures

Fastest Performance

- Low performance impact of 6% for on-access scanning (source: Canon)
- The 19MB/sec throughput scanning rate on Windows 2003 Server, is 2 to 50 times faster than competition (Source: Virus Bulletin)
- Lowest Resource Utilization
- Optimized engine uses under 20 MB memory on average
- Extends the life of IT resources

Powerful Centralized Management

- N-tier scalable to 10's of thousands of workstations
- Easy to install and use - usually in under one minute!! And less than 5 minutes on typical networks
- Sophisticated control, logging and reporting
- Automated hourly updates
- Increased user compliance

Essential Security
against Evolving Threats

NOD32
antivirus system

Integrated Modules

- Antivirus MONitor (AMON)
- NOD32 — on-demand scanner
- Internet MONitor (IMON) - scans incoming emails via the POP3 protocol
- E-mail MONitor (EMON) — scans incoming/outgoing emails via MAPI interface
- Document MONitor (DMON) — scans Microsoft Office documents (including in Internet Explorer)

Key Functionality

- ThreatSense™ technology - a single optimized anti-threat engine for analyzing code to identify malicious behavior; such as viruses, spyware, adware, phishing and more
- Unprecedented heuristic analysis capable of discovering new malware threats as they emerge
- Powerful virtual PC emulation technology enables unpacking and decryption of all types of archives and run-time packing
- Able to clean active malware running in memory
- Protects at multiple infiltration points - including HTTP, POP3, SMTP, and all local and removable media
- Removes infections from files that are locked for writing (e.g. loaded DLL file)
- Prevents infected files from being opened, executed and warns on creation of infected files
- Automatic execution on system startup
- Supports multiple Terminal Server environments
- Supports scanning of mapped network disks

Awards & Certifications

ThreatSense.NET extends the power of ThreatSense's powerful analytics on a global scale. NOD32 system can automatically (or manually) submit samples of new suspected malware to threat lab researchers for analysis. ESET clients receive notification of new malware outbreaks and tips on how to protect themselves via this feedback loop as well. Globally collected information and statistics are made available online at ThreatSense.NET (the successor to ESET's popular VirusRadar.com).

Supported Platforms

- NOD32 for Windows workstations
- NOD32 for Windows File Servers
- NOD32 for web servers
- Remote Administrator – Central Management Console
- NOD32 Enterprise Edition
- NOD32 Small Business Server Edition
- NOD32 for Microsoft Exchange
- NOD32 for Lotus Notes
- NOD32 for Linux Mail Server
- NOD32 for Linux File Servers (Redhat, Debian, Suse, Mandrake, Other)
- NOD32 for FreeBSD
- NOD32 for Novell Netware
- Kerio MailServer
- Kerio WinRoute Firewall

Services

- Free world-wide email and telephone support
- Proactive Malware Protection Training
- On-Call Incident Response Service
- Free online threat information center
